

CDEX Hires Smith Alling Lane September 2006

CDEX, a Maryland based technology development company, has partnered with Smith Alling Lane to implement new technology that will help combat Washington's growing methamphetamine problem.

Using UV technology, CDEX has developed an Illicit Drug Detector that detects trace amounts of methamphetamine substances. Currently, prototypes of the Illicit Drug Detector are being evaluated for their effectiveness. To begin implementing these prototypes in Washington State law enforcement, CDEX has hired Smith Alling Lane.

Smith Alling Lane is a governmental affairs firm based in Tacoma, Washington that focuses primarily on new technologies and public safety. They represent clients on all levels of government, and are pleased to be working with CDEX to help fight illegal methamphetamines.

Illegal methamphetamine use has become a serious problem in Washington State. In the year 2000, Washington ranked number two nationally in the number of methamphetamine labs. Since then, the state has remained one of the top ranked states for methamphetamine labs.

CDEX's illicit drug detector technology could provide Washington State law enforcement with the resources they need to combat the growing methamphetamine problem.
